PROFESSIONAL SUMMARY

Senior Software Engineer & Tech Lead with 9+ years architecting full-stack systems using Node.js, TypeScript, React, Python, and GraphQL. Currently leading search and discovery engineering at Upwork, serving 800K+ monthly active users. Proven record of reducing API latency by 35%, migrating legacy monoliths to microservices, and mentoring engineers to senior-level promotions. Building production AI systems with LangGraph, RAG pipelines, and multi-agent orchestration. AWS-certified, with deep expertise in distributed systems, cloud infrastructure, and data-intensive platforms.

EXPERIENCE

Upwork May 2022 – Present

Senior Frontend Developer — Marketplace Engineering (Search & Discovery)

- Led frontend feature delivery across multiple Vue.js/Nuxt marketplace applications — talent discovery, job details, profile verification, and navigation flows — serving 800K+ monthly active users
- Built and refined AI-powered search and freelancer insight experiences, implementing fallback handling, experiment orchestration, facet/ontology updates, and resilient error recovery when upstream insight requests fail
- Architected migration from legacy PHP monolith to modern GraphQL microservices, reducing API response time by 35% and improving system observability with CloudWatch and Datadog dashboards
- Implemented client and owner action workflows in job-detail surfaces, including job flagging, conditional actions based on ownership state, mobile interaction patterns, and profile verification/onboarding flows with modal behavior and eligibility refresh logic
- Strengthened search UX across high-traffic surfaces by improving query highlighting, spacing preservation, HTML-based suggestion rendering protection, and overall rendering reliability
- Acted as tech lead for cross-team initiatives, partnering with Product, Design, and Data Analytics to define A/B testing strategies and iterate on search relevance using user behavior metrics
- Drove test modernization by expanding unit, integration, and Playwright E2E coverage, leading migration from legacy Cypress infrastructure, and documenting replacement testing approaches
- Consistently shared knowledge and workflows across teams through sprint ceremonies, architecture reviews, pair programming, and informal technical conversations with colleagues on Vue, TypeScript, and frontend best practices
- Supported frontend platform reliability through dependency updates, build/pipeline fixes, privacy-related updates, and cross-project maintenance across shared navigation and platform surfaces

Intuit Jun 2019 – Mar 2022

Senior Software Engineer — Data Curation Platform

- Developed data curation web application using React, Node.js, and GraphQL, enabling internal teams to manage and visualize large-scale datasets in real time
- Integrated internal systems and external providers via GraphQL (server + client), reducing data retrieval time and consolidating 4 separate APIs into a unified interface
- Built real-time data visualization dashboards with dynamic charting, enhancing data presentation for stakeholders across business units
- Performed code reviews and mentored team members on best practices, contributing to a measurable improvement in code quality and test coverage (Jest, Cypress)

Jobity May 2017 – Oct 2021

Full Stack Developer (Staff Augmentation)

- Delivered full-stack web applications across multiple client engagements using React, TypeScript, Node.js, GraphQL, Python/Django, Laravel, Prisma, and Docker — building interactive D3.js data visualizations, financial analytics dashboards, marketing analytics platforms, and cross-platform mobile apps with React Native
- Led TypeScript adoption across codebases, designed system architectures for complex business requirements, and collaborated directly with executive stakeholders to iterate on product direction and UX

Palosanto Solutions / Freelance May 2015 – May 2017

Software Developer & VoIP Engineer

- Designed and developed VoIP applications with Asterisk, and built web applications using PHP, AngularJS, and EmberJS
- Provided technology consulting and system architecture design for external clients, including data flow modeling and database schema design

PROJECTS

AI Ecommerce — Autonomous PC Assembly & Marketplace Pipeline

Stack: Python, Django, LangGraph, MedusaJS, OpenAI/Gemini API, PostgreSQL, Redis

- Architected multi-agent orchestration system using LangGraph that autonomously scrapes hardware, validates component compatibility, and publishes enriched listings to MercadoLibre
- Achieved 100% automation of listing creation with zero incompatible component bundles shipped, and real-time price and stock synchronization
- Implemented self-healing inventory logic: when components go out of stock mid-assembly, the graph auto-selects compatible alternatives

Narbox — Package Consolidation & Global Logistics Platform

Stack: Next.js 15, Django, GraphQL (Graphene + Apollo), PostgreSQL, Tailwind CSS

- Engineered full-stack logistics platform for international package forwarding with robust Django GraphQL API and Next.js admin dashboard

PBX AI — Real-time Voice AI Orchestration Engine

Stack: Node.js, TypeScript, Fastify, Asterisk ARI, WebSockets

- Architected low-latency system bridging traditional VoIP telephony with generative AI, enabling real-time bidirectional voice interactions

TECHNICAL SKILLS

Languages & Runtime: TypeScript, JavaScript, Python, Node.js, GoLang, PHP

Frontend: React, Vue.js (2/3), Next.js, Nuxt.js, Astro, Tailwind CSS

Backend & APIs: GraphQL, REST, Django, Express, NestJS, FastAPI, Prisma

Databases: PostgreSQL, MongoDB, Redis, Elasticsearch, Couchbase, DynamoDB

Cloud & DevOps: AWS (Lambda, EC2, S3, CloudWatch, RDS), Docker, CI/CD, GitHub Actions

AI / LLM Integration: LangGraph, LangChain, RAG Pipelines, OpenAI API, Gemini API, Anthropic Claude API, Vector DBs

Testing: Jest, Cypress, Playwright, Vitest

Practices & Tools: Microservices, Event-Driven Architecture, TDD, Agile/Scrum, System Design, Git

Mobile: React Native, Ionic, Flutter

EDUCATION & CERTIFICATIONS

Escuela Politécnica Nacional — Engineer's Degree, Electronics

Quito, Ecuador | 2011 – 2015

AWS Certified AI Practitioner — Amazon Web Services Oct 2025

AWS Certified Solutions Architect – Associate — Amazon Web Services Sep 2018

Zend Certified PHP Engineer — Zend / Rogue Wave Software May 2014

LPIC-2 Linux Professional — Linux Professional Institute May 2012

Languages: Spanish (Native) | English (Professional)
